

4. U.S. Cultural Adaptation Reflection

In the U.S., IT supervision is often marked by flat hierarchies, rapid feedback, and agile team structures—contrasting with the more formal and hierarchical approach I experienced at home. Constructive criticism is common and direct, and leaders are expected to facilitate autonomy and foster inclusion.

- *Differences: Decision-making is more decentralized; team members are expected to challenge ideas constructively, and results matter more than rank.*
- *Adaptations: I proactively solicit input, give and welcome feedback, and work to empower diverse team members to lead initiatives.*
- *Success in U.S. Environment: Embracing transparency and collaborative problem-solving will help me earn trust and inspire high performance while bridging any cultural divide.*
